Cyber Café

Multi-user web browsing platform

SALES: 0870 901 0107

Protected and Shared Internet Access

Waveworks' Cyber Café is a simple yet secure solution that provides multiple users with a reliable platform from which they can openly browse the internet. Each Cyber Café station utilizes high-quality, reliable hardware with a proprietary, uniform read-only operating system. Users can surf the Internet but cannot modify any settings as the hard disk has been made fully inaccessible. This also means that you need not worry about the threat of viruses or hackers and a simple PC restart resets everything back to the default homepage.

On starting the Cyber Café station the user will automatically be presented with the website of your choice which will be configured as the default homepage. The user environment background and screen-saver can also be customised to display your company logo or instructions if necessary.

Internet bandwidth is provided as 2M ADSL² as standard and can be increased if necessary. The managed access router is continually monitored by Waveworks' Network Operations Centre for availability and bandwidth usage.

Support

Each Cyber Café station is completely maintenance free and locked-down for protection. However, if a problem should arise you have access to Waveworks' PrimeCare Support helpdesk seven days a week and the added benefit of next working day¹ replacement in the event of a hardware failure.

Restricting Web Content

The Cyber Café solution can also be provided with web content filtering to protect your users from undesired Internet material. The intelligent filter, WaveFilter-web, works by using a range of techniques to identify and filter out access to unsuitable websites whilst blocking malicious content. This filter can be configured to your requirements and is centrally managed by Waveworks' NOC or if preferred, can be managed by yourself through a secure web interface.

Features

- ▶ Protected Internet access
- ▶ User PC applications option
- ▶ Locked homepage
- ▶ Locked hard drive
- ▶ Branded for your business
- ▶ Secure Remote Management

Benefits

- ▶ Virus and hack proof
- ▶ Scalable
